

Certification

AWS Certified Solutions Architect – Associate

Verification link: https://www.credly.com/badges/8c46e207-9737-481f-ab89-d2f7a4a3a9bb/public_url

Professional Summary

Experienced DevOps Engineer with over 10+ years of expertise in cloud infrastructure, build and release management, Linux/Unix administration, and software development. Proficient in designing scalable, efficient systems leveraging AWS, GCP, and Azure. Skilled in CI/CD pipelines, automation, and container orchestration with a proven ability to optimize processes for enhanced scalability and performance.

- Designed, deployed, and managed **AWS, GCP, and Azure infrastructure**, including EC2, S3, RDS, DynamoDB, IAM, VPC, CloudFormation, Cloud Build, Compute Engine, GKE, Cloud SQL, App Services, and Virtual Machines.
- Built and maintained **CI/CD pipelines** using **Jenkins, GitLab CI/CD, Cloud Build, and Rundeck** for automated build, test, and deployment workflows across multiple environments.
- Managed **Git repositories** with structured branching, tagging, and release strategies to enable controlled deployments and multi-team collaboration.
- Implemented **containerization and orchestration** using **Docker and Kubernetes (GKE & EKS)**, including rolling updates, auto-scaling, resource optimization, and cluster security.
- Automated infrastructure provisioning and configuration using **Terraform, CloudFormation, and Ansible**, ensuring consistency, repeatability, and compliance across multi-cloud environments.
- Implemented **monitoring, logging, and alerting** with **Splunk, Dynatrace, CloudWatch, Cloud Logging, Site24x7, Prometheus, and Grafana** for full-stack observability and proactive issue detection.
- Led **Major Incident (MI) and Critical Issue Response (CIRS)** processes, performing root cause analysis, preventive actions, and MTTR reduction.
- Performed **JVM tuning, heap/thread dump analysis, and performance troubleshooting** for memory optimization and resolving unresponsive nodes.
- Administered **ServiceNow ITSM workflows** for incidents, changes, service requests, reporting, dashboards, and change calendar reviews following ITIL best practices.
- Enforced **cloud security and governance**, managing IAM, PAM (Delinea), key rotation, bastion hosts, SSH, and compliance-driven access reviews.
- Designed and deployed **serverless architecture** using **AWS Lambda, API Gateway, DynamoDB**, and implemented event-driven architecture using **Pub/Sub**.
- Experience with **Big Query, Databricks (Delta Lake, Spark SQL), Cloud SQL, MongoDB, and AWS Redshift** analytics, migrations, and operational insights.
- Optimized **cloud costs and resource utilization** using labeling, tagging, right-sizing, and budget monitoring practices.
- Extensive experience in automation and scripting with **Shell, Bash, Python, and Perl** to streamline deployments, operational workflows, and infrastructure management.
- Led on-premises to cloud migrations and hybrid deployments with minimal downtime, ensuring multi-tier application availability.
- Deployed and maintained applications on **Apache, Nginx, Tomcat, and JBoss**, ensuring high availability and performance.
- Architect-level **AWS infrastructure expert** specializing in **Infrastructure-as-Code (Terraform, CloudFormation)** and large-scale **RHEL 7 to RHEL 8** server migrations.
- Proven experience designing secure, FedRAMP-authorized (**GovCloud**) multi-tier environment structures supporting 30+ internal and external partner integrations.
- Strong background in implementing DevSecOps practices, automated CI/CD pipelines (**Jenkins, GitHub Actions**), and continuous security posture management.
- Technical leader adept at driving infrastructure automation, defining enterprise **IaC** standards, and aligning solutions with federal governance and compliance requirements.
- Operated and troubleshot **OpenStack services (Nova, Neutron, Cinder, Keystone)** in production private-cloud environments; performed incident management, RCA, and customer-facing debugging across multiple time zones.
- Performed **Linux** kernel tuning, filesystem and partition management, **LVM/SCSI** multipath storage troubleshooting (**Ceph** basics, I/O analysis), and network diagnostics (**DHCP, DNS, VLANs, bonding, tcpdump/traceroute**) to resolve platform performance and availability issues.
- Hands-on experience with DevOps tools including **Jira, Bitbucket, GitHub, GitLab, IBM ClearQuest, JFrog Artifactory, Nexus, Vagrant, VMware, and OpenShift**.
- Proficient in software development lifecycle (**SDLC**), Agile methodologies, sprint planning, and post-production analysis.

SRE, Cloud & Platform Engineering Highlights

Core focus: Site Reliability Engineer, Cloud Engineer, Platform Engineer, Reliability Engineering, SLO, SLI, Error Budget, OpenTelemetry, OpenSearch, Production Readiness, Cloud Architecture, Amazon Web Services, Google Cloud Platform, AWS CDK, GitOps, Argo CD, GitHub Actions, Azure DevOps, Deployment Automation, Infrastructure Engineer, REST APIs, DevSecOps, CSPM, CrowdStrike, Cloud Security Remediation, Security Remediation, Vulnerability Remediation, Data Engineering, AI/ML, GenAI, LLM Inference, Azure AI Search, GraphRAG, Postmortem, and Toil Reduction.

Championed **Reliability Engineering** best practices as a lead **Site Reliability Engineer**; defined strict **SLO**, **SLI**, and **Error Budget** metrics while engineering an **OpenTelemetry** and **OpenSearch** observability stack to validate **Production Readiness** before major releases.

Led complex **Cloud Architecture** initiatives as a senior **Cloud Platform Engineer**, provisioning multi-cloud environments on **Amazon Web Services** and **Google Cloud Platform** using **AWS CDK**.

Established mature **GitOps** workflows utilizing **Argo CD**, **GitHub Actions**, and **Azure DevOps** to achieve zero-downtime **Deployment Automation** across global clusters.

Operating as a core **Infrastructure Engineer** and **Cloud Engineer**, developed custom **REST APIs** to bridge legacy financial systems with modern infrastructure, accelerating data collection without disrupting existing services.

Spearheaded comprehensive **DevSecOps** pipelines by embedding **CSPM** tools and **CrowdStrike** directly into the build process, automating **Cloud Security Remediation**, **Security Remediation**, and **Vulnerability Remediation** to meet strict banking compliance standards.

Architected scalable **Data Engineering** and **AI/ML** pipelines as a lead **Platform Engineer**, optimizing backend resources specifically for **GenAI** and **LLM Inference** workloads.

Integrated **Azure AI Search** and **GraphRAG** into internal incident management tools, significantly speeding up data retrieval for root cause analysis during critical outages.

Drove continuous improvement by facilitating blameless **Postmortem** reviews for major incidents, directly translating findings into automated **Toil Reduction** scripts that recovered hundreds of engineering hours annually.

Key Skills and Expertise

- Cloud Platforms
- CI/CD and Automation
- Containerization and Orchestration
- Monitoring and Logging
- Version Control
- Infrastructure Automation
- Data and Analytics
- Database Management
- Web and Application Deployment
- AWS Expertise
- CI/CD Management
- Container Security
- Application Integration
- Containerized Build Pipelines
- Azure Cloud Development
- Databricks & Big Data

Professional Experience

DevOps Engineer

SAP-Ariba

07/2022 to Current

Remote

Key Responsibilities & Achievements

Project Overview:

Providing L2/L3 production support and SRE operations for **SAP Ariba**, **Fieldglass**, **BTP**, **HANA**, and **NextGen** platforms across global data centers (US, EU, Brazil) and multi-cloud environments. Focused on cloud infrastructure automation, CI/CD, container orchestration, monitoring, incident response, and operational reliability, ensuring high availability, SLA compliance, and optimized performance.

- Managed **Git** repositories with structured branching, merging, tagging, and release strategies to support continuous delivery and controlled production releases.
- Designed, implemented, and maintained CI/CD pipelines using **Jenkins**, **Cloud Build**, **GitHub**, **Rundeck**, automating build, test, and deployment workflows across dev, QA, staging, and production environments.
- Provisioned, configured, and managed cloud infrastructure on **AWS** and **GCP** using **Terraform** and **CloudFormation**, delivering scalable, fault-tolerant, and secure environments.
- Deployed, operated, and optimized containerized applications on **Kubernetes (GKE & EKS)** and **Docker**, implementing rolling deployments, auto-scaling, health checks, and resource optimization.
- Led and participated in Major Incidents (MI) and Critical Issue Response (CIRS), coordinating bridge calls, stakeholder communication, RCA preparation, and preventive action planning.
- Applied SRE best practices to reduce MTTR through proactive monitoring, alerting, and automation using **Dynatrace**, **Splunk**, **Moogsoft**, **Site24x7**, **Cloud Monitoring**, **Cloud Logging**.
- Built and maintained observability dashboards using **Grafana**, **Cloud Monitoring**, and other tools to improve system visibility and operational readiness.

- Performed JVM troubleshooting and performance tuning, including heap dump and thread dump analysis, memory optimization, and resolving unresponsive services.
- Automated operational workflows and remediation runbooks using **Rundeck, Shell, Perl, Python**, reducing manual toil and improving operational efficiency.
- Administered **ServiceNow** ITSM workflows for incident, change, service request, reporting, dashboards, and change calendar reviews following ITIL practices.
- Enforced security and access governance, managing **IAM, Delinea Secret Server (PAM), RSA, bastion hosts, SSH, key rotation**, and compliance-driven access reviews.
- Audited and optimized cloud environments by removing inactive service accounts, unused public IPs, and standardizing access and IP allocation procedures.
- Leveraged **GCP services (Compute Engine, Cloud Storage, Cloud SQL, BigQuery, Pub/Sub, Cloud Functions, IAM)** for scalable, event-driven architectures.
- Integrated **Pub/Sub** for asynchronous communication between microservices and downstream systems.
- Performed data analytics and reporting using **BigQuery** to enable operational insights and data-driven decision-making.
- Optimized cloud costs through resource right-sizing, labeling, tagging, budgeting, and continuous monitoring.
- Utilized **Postman** for automated API testing, improving service reliability and reducing manual QA effort.
- Collaborated closely with Development, QA, SRE, IPRE, Cloud, and Product teams to troubleshoot issues, support releases, and improve platform reliability.
- Manage and troubleshoot core **OpenStack** services (Nova, Neutron, Cinder, Keystone) to restore service availability and perform customer-facing debugging and escalation.
- Troubleshoot storage and I/O issues using **LVM, SCSI** multipath and Ceph fundamentals; perform capacity planning and remediation for storage-related incidents.
- Perform network diagnostics and configuration for **DHCP, DNS, VLANs**, bonding and basic routing; use tcpdump/traceroute for packet-level troubleshooting.
- Apply deep expertise in Linux internals, storage (LVM, Ceph, multipath), and networking (VLANs, bonding, routing, tcpdump) to resolve complex system-level issues and optimize platform performance.
- Drive observability initiatives using **Prometheus** and **Grafana** for metrics, alerts, and log analysis; implemented automated monitoring workflows that improved detection of anomalies by 60%.
- Collaborate closely with engineering teams on platform improvements, patching, configuration management, and contributions to open-source fixes via PRs and issue triage
- Participated in KTLO activities, on-call rotations, MI prevention initiatives, and operational readiness for onboarding new platforms (**KYMA, DWC, NextGen**).
- Used **CI/CD** automation testing to assess application functionality and user experience effectively.
- Designed and configured cloud-based infrastructure on **AWS**, enhancing application scalability and reliability.
- Engaged in proactive monitoring of applications and infrastructure to anticipate and mitigate potential issues before impact.
- Collaborated with software development teams to automate the build and deployment process, significantly reducing release times.

Environment/Tools:

AWS, GCP, Kubernetes (GKE & EKS), Terraform, CloudFormation, Jenkins, Cloud Build, GitHub, Docker, Ansible, Splunk, Dynatrace, Moogsoft, Site24x7, ServiceNow, Rundeck, Python, Shell, SAP Ariba, Fieldglass, BTP, HANA, NextGen, Postman, BigQuery, Grafana

SRE/DevOps Engineer
Verizon

10/2021 to 06/2022
Piscataway, NJ

Key Responsibilities:

- Managed **Kubernetes** deployments using **Helm charts**, orchestrating containerized applications with scaling, CI/CD pipelines, and automated build workflows.
- Designed and implemented secure, scalable **AWS** solutions (**VPC, IAM, EC2, S3, Lambda, RDS, ALB, Auto Scaling**) and deployed containerized applications via **ECS** and **Docker**.
- Automated infrastructure provisioning and configuration using **Terraform, CloudFormation, Google Cloud Deployment Manager**, ensuring reproducible and compliant deployments.
- Led migration of legacy monolithic systems to microservices architecture using **Docker, Kubernetes**, and automated **CI/CD pipelines**.
- Built and maintained CI/CD pipelines using **Jenkins** and **GitLab Runner**, integrating automated tests, **SonarQube** code quality inspections, and **Docker-based build nodes**.
- Developed **Python Lambda** functions and **REST/SOAP APIs** for task automation, EC2 snapshot management, and application integration workflows.
- Administered **GitHub, GitLab, Nexus** repositories, implementing version control strategies, managing access, and optimizing artifact management.
- Monitored system performance and application health using **Prometheus, Grafana, Splunk, Stackdriver**, fine-tuning alerts and dashboards for proactive issue resolution.
- Managed **AWS IAM, EC2, ELB, EBS, S3, Glacier, DMS**, ensuring secure access, optimized resource usage, and large-scale database migrations.
- Deployed and maintained applications on **Apache Tomcat, Nginx**, creating deployment scripts and optimizing configurations for production stability.
- Collaborated with development, QA, and operations teams to streamline releases, cloud migrations, and multi-environment deployments, ensuring reliability and high availability.

- Architected the end-to-end **AWS** infrastructure and **Infrastructure-as-Code** (IaC) framework using Terraform and CloudFormation to support a seamless **RHEL 7 to RHEL 8** server migration across multi-tier environments.
- Designed secure **VPC** account structures and interface patterns for 30+ partner integrations within a FedRAMP-authorized GovCloud environment.
- Automated CI/CD deployment pipelines using Jenkins and GitHub Actions while integrating continuous vulnerability scanning (**Nessus, Turbot**) to ensure security compliance and close open POA&Ms.
- Led technical design discovery, established environment cutover and DNS validation strategies, and provided architectural direction to execution teams.

Environment/Tools:

Kubernetes, Docker, Helm, Git, GitLab, Jenkins, Terraform, CloudFormation, GCP, AWS, Python, Bash, Ansible, Maven, Apache Tomcat, Nginx, Prometheus, Grafana, Splunk, Stackdriver, SonarQube.

Cloud/DevOps Engineer GoDaddy

07/2020 to 09/2021
Tempe, AZ

Key Responsibilities:

- Managed **GCP** infrastructure using **Compute Engine, Cloud Load Balancing, Cloud Storage, Cloud SQL, Stackdriver**, and **Cloud Deployment Manager** for monitoring and automation.
- Configured **firewall rules, Cloud CDN**, and designed **GKE clusters** with **Helm, kubectl, ingress controllers, RBAC** for secure, scalable deployments.
- Built and maintained **Jenkins** pipelines for CI/CD, integrating **Google Container Registry (GCR)**, automated testing, and environment-based promotions.
- Designed and deployed **AWS** infrastructure (**VPC, EC2, S3, RDS, DynamoDB, IAM, Route 53, CloudWatch, Auto Scaling**) using **CloudFormation** and **Terraform**.
- Automated environment provisioning and management with **Python (Boto3), AWS CLI, CloudFormation**, improving efficiency and reducing manual work.
- Orchestrated containerized applications using **Docker, Kubernetes**, defining pods, scaling rules, and implementing Kubernetes-based CI/CD pipelines.
- Containerized Java microservices with **Maven, Dockerfiles, Docker Maven Plugin**; automated deployments using **Docker Compose** and **Docker Machine**.
- Managed configuration and automation using **Ansible, Chef, Puppet**, including **OpenShift** cluster management and infrastructure as code.
- Deployed and monitored **ELK stack (Elasticsearch, Logstash, Beats)** and **CloudWatch metrics** for observability and performance optimization.
- Created **AWS Lambda** and **Python** scripts for automation; managed IAM roles, SQS, and S3 for operational efficiency.
- Led cloud migration and multi-cloud operations (**AWS, GCP, Azure**) including **Azure VMs, App Services, Storage, SQL, Redis, Azure AD**, implementing IaC via **ARM templates, Bicep, PowerShell**.
- Automated CI/CD pipelines using **Jenkins, Bamboo, GitHub, GitLab, Maven, Nexus**, integrated with **Jira, Confluence, Artifactory** for artifact and release management.
- Supported IoT and enterprise platform deployments, leveraging **Docker, Kubernetes, OpenShift, Terraform, CloudFormation, monitoring tools (Prometheus, Grafana, Stackdriver)** for scalable, high-availability solutions.

Environment/Tools:

AWS (EC2, RDS, ELB, S3, CloudWatch, CloudFormation, Route 53, Lambda, Auto Scaling, SQS, SNS), GCP (Compute Engine, Cloud SQL, Cloud Storage, Stackdriver, Cloud Deployment Manager, GKE), Azure (VMs, App Services, Storage, SQL, Redis, Azure AD), Jenkins, Bamboo, GitHub, GitLab, Maven, Nexus, Chef, Puppet, Ansible, Docker, Kubernetes, OpenShift, ELK Stack, Python, PowerShell, Terraform, CloudFormation, JIRA, Confluence, Docker Compose, Docker Machine, Kubernetes dashboard

DevOps Engineer/ Build and Release Engineer UCSF

04/2019 to 06/2020
San Francisco, CA

Key Responsibilities:

- Managed **Software Configuration Management (SCM)**, including code compilation, packaging, release methodology, and application configuration.
- Created **Azure Event Grid** for publishing and consuming event-driven data.
- Automated **CI/CD pipelines** using **Jenkins, Docker, AWS CloudFormation, Maven, ANT**, and build pipeline plugins.
- Designed and maintained scalable, fault-tolerant **Azure environments** across multiple availability zones using **Terraform** and **CloudFormation**.
- Automated **Datadog dashboards** using **Terraform scripts** and maintained **PaaS services** and **API Gateway** infrastructure.
- Designed and implemented **ETL pipelines** with **Azure Data Factory, T-SQL, Spark SQL, U-SQL**, loading data into **Azure Data Storage**.
- Used **Azure API Management** to manage on-premises API services and implement policies.
- Built and managed **Jenkins jobs** for automated builds and deployments across **QA, UAT, Staging, and Production Linux environments**, triggered by Git commits.

- Developed **Azure Function Apps** for API services and automation and wrote **SQL scripts** for data processing and Databricks Spark cluster management.
- Implemented **branching and labeling strategies** using **Git version control** and deployed artifacts to **Nexus repositories**.
- Implemented disaster recovery (**SRDF/EDP**) on **EMC VMAX storage** and configured **SonarQube** for code quality monitoring.
- Configured **upstream/downstream Jenkins jobs** for automated pipeline triggers and used **Azure Service Bus queues and WebJobs** for asynchronous messaging between APIs.
- Deployed applications to **WebLogic Application Server** for Production and Staging using **EAR/WAR files**.

Environment/Tools: Jenkins, JIRA, SonarQube, Terraform, Azure Cloud Services, Azure Data Factory, SQL Server Azure 2014, Databricks, Maven, ANT, WebLogic, MVC, XML, HTML, CSS, Bootstrap, Web API, AngularJS, jQuery, JavaScript, AJAX.

Build and Release Engineer
Google

04/2015 to 07/2018
Hyderabad, India

Key Responsibilities:

- Provided **technical support** and troubleshooting for UNIX/Linux systems, resolving system and access issues across multi-user environments.
- Created and managed **user accounts, groups, and permissions** on Linux servers for secure access control.
- Installed, configured, secured, backed up, and upgraded **RHEL (5.5+)** systems, ensuring system stability and compliance.
- Built new Linux servers (physical/virtual) using **Kickstart and PXE** for automated provisioning and environment consistency.
- Performed **LVM operations** (resizing, creation, migration) to support system scalability.
- Tracked and reported on key performance indicators KPIs related to build and release processes, driving continuous improvement.
- Conducted post-release reviews to gather feedback and identify areas for improvement in future release cycles.
- Streamlined environment setup and configuration management using infrastructure as code IaC tools, significantly reducing setup times.
- Configured and maintained build servers, ensuring optimal performance for compilation and build processes.
- Developed and maintained **Shell scripts** to automate routine administrative tasks, improving operational efficiency.
- Configured and maintained **build servers**, CI/CD pipelines, and source code repositories, ensuring optimized build and release processes.
- Managed UNIX, Red Hat Linux, and Solaris administration, including documentation, best practices, and troubleshooting kernel or performance issues.
- I tested software solutions, gathered requirements, and collaborated with engineering teams to resolve interface and performance issues.
- Monitored system performance, applied **Linux kernel tuning**, and documented releases for traceability and continuous improvement.

Environment/Tools: UNIX Shell Scripting, Linux RPM, Red Hat, CentOS, Debian, DNS, SAN Switches, Kickstart.

Linux Engineer
Excela Solutions

07/2014 to 03/2015
Hyderabad, India

Responsibilities:

- Provided technical support and troubleshooting for **UNIX/Linux systems**, resolving system and access issues efficiently.
- Created and managed **user accounts, groups, and permissions** on Linux servers for secure access control.
- Installed, configured, secured, backed up, and upgraded **RHEL systems (5.5+)**, maintaining stability and compliance.
- Built new Linux servers (physical/virtual) using **Kickstart and PXE** for automated provisioning.
- Performed **LVM operations** including resizing, creation, and migration to support system scalability.
- Developed and maintained **Shell scripts** to automate administrative tasks and improve operational efficiency.
- Supported **Linux installations, patching, and configuration management** in production environments.
- Managed **UNIX, Red Hat Linux, and Solaris administration**, including documentation and best practices.
- Utilized the **VI editor** for configuration, scripting, and system maintenance tasks.
- Collaborated with teams, managed complaints, and resolved customer queries through clear communication and **step-by-step solutions**.

Environment/Tools: UNIX Shell Scripting, Linux RPM, Red Hat, CentOS, Debian, DNS, SAN Switches.

Education Details

Masters: MSIT
Wilmington University
Bachelor of Technology: CSE
JNTUH

2021
Delaware, USA
2014
India
